

120-Day Entry Plan

Managing Director, CX AI Delivery | Portfolio diagnosis, lighthouse proofs and practice operating cadence

DAYS 0-30

Read the system

- Review practice P&L, pipeline, backlog, utilization, delivery health, partner economics and managed-account growth plans.
- Interview executive sponsors, Business Development, Digital Solutions, CXM account leaders, operations, finance, product, engineering, security, legal and talent leaders.
- Shadow agents and frontline leaders in representative queues; observe work, exceptions, coaching, knowledge and failure demand.
- Review ten wins, ten misses and ten stalled or under-optimized deployments.
- Map where decisions split across sales, solutioning, implementation, adoption and managed operations.

Output: practice system map, P&L hypothesis, account segmentation and decision-bottleneck register.

DAYS 31-60

Choose the portfolio

- Segment existing and prospective accounts by outcome potential, interaction profile, data/knowledge readiness, authority risk and commercial path.
- Select two lighthouse transformations: one managed-account expansion and one new-market or partner-led offer proof.
- Identify stop/hold candidates consuming scarce practice capacity without a strong value path.
- Define the workshare, human authority, platform/partner/IP composition, success evidence and change burden for each lighthouse.
- Align named executive sponsors and operating owners.

Output: portfolio investment decisions, lighthouse charters and first version of the CX AI Workshare Map.

OPERATING CADENCE ESTABLISHED BY DAY 60

CADENCE	PURPOSE	PARTICIPANTS
Weekly lighthouse review	Outcome, adoption, quality, delivery, risk and economics.	Account, operations, solution, product, finance and client owners.
Biweekly portfolio review	Invest, sequence, partner, hold and stop decisions.	Practice leadership, BD, CXM and finance.
Monthly offer harvest	Convert delivery evidence into reusable patterns and enablement.	Delivery, product, partnerships and talent.
Quarterly executive review	Growth, margin, capability and strategic portfolio choices.	TELUS Digital executive sponsors.

INITIAL DATA AND EVIDENCE REQUEST

PORTFOLIO	DELIVERY	OPERATIONS	ECONOMICS	TALENT
Pipeline, account expansion plans, offer mix and partner-sourced opportunities.	Cycle time, scope changes, implementation burden, defects and escalations.	Service quality, adoption, overrides, exceptions, knowledge and coaching signals.	Revenue, gross margin, delivery cost, utilization, partner cost and leakage hypotheses.	Capability map, open roles, specialist constraints, regional depth and learning mechanisms.

LISTENING MAP

Clients and sponsors; frontline agents and supervisors; CXM account and operations leaders; Business Development; digital solution leaders; AI/data, platform and integration teams; finance; security, privacy and legal; product, partner and talent leaders. Each conversation should surface decisions, evidence gaps, incentives and change burden.

Proof, Industrialize and Scale

DAYS 61-90

Run the proof

- Launch two bounded transformations with visible outcome, authority, evidence and production-ownership contracts.
- Use forward-deployed teams to work shoulder-to-shoulder with agents, supervisors and operations leaders.
- Instrument adoption, override, exception, service quality, delivery cost and client-outcome signals.
- Resolve scope and ownership ambiguity before it becomes margin leakage.
- Capture reusable decisions, components, estimation assumptions and change patterns as the work happens.

Output: live outcome review, delivery evidence, corrected economics and reusable pattern candidates.

DAYS 91-120

Industrialize the advantage

- Convert validated patterns into offer modules, estimation logic, governance standards, partner plays and enablement.
- Set balanced practice scorecard spanning growth, margin, adoption, quality, delivery cycle, reuse and capability.
- Define talent architecture across consulting, CX architecture, data, AI, integration, change, operations and partner specialties.
- Publish the next two-quarter portfolio and capacity plan.
- Present explicit invest, sequence, partner and stop decisions to executive leadership.

Output: CX AI practice operating system and next-wave growth portfolio.

DAY-120 EXECUTIVE SCORECARD

DIMENSION	QUESTION	EVIDENCE EXPECTED
Growth	Are offers and account transformations creating qualified, winnable revenue?	Pipeline quality, expansion path, sponsor commitment and commercial thesis.
Economics	Is delivery increasing value density rather than shifting hidden cost?	Cost-to-serve, delivery cost, margin trajectory and partner economics.
Client outcome	Did the interaction portfolio improve a result the client values?	Agreed outcome and operational evidence.
Adoption	Did agents, leaders and customers change behavior?	Use, override, coaching, exception and experience signals.
Trust	Are authority, escalation, quality and governance explicit?	Human-decision rights, quality evidence, incident and escalation paths.
Reuse	Did delivery leave behind leverage?	Offer modules, estimation patterns, enablement and adaptation burden.
Capability	Can the team own and improve the system?	Named ownership, skill depth, learning cadence and talent plan.

HYPOTHESES TO VALIDATE, NOT ASSUMPTIONS TO IMPOSE

- The largest near-term growth pool may be managed-account transformation, where TELUS Digital already controls enough operating context to prove value.
- The differentiator may be the combination of operator learning, forward-deployed engineering, Fuel iX and broad platform partnerships - not any single product.
- The practice may need stronger shared economics and adoption governance across presales, delivery and operations.

FAILURE MODES AND COUNTERMEASURES

FAILURE MODE	COUNTERMEASURE
Presales promise outruns delivery reality.	One accountable charter linking outcome, scope, authority, evidence, owner and economics.
Go-live is treated as value realization.	Continue review through adoption, service quality, production ownership and client outcome.
Custom work consumes the practice.	Classify client-specific versus reusable decisions during delivery; stop low-leverage exceptions.
Automation damages trust or frontline behavior.	Instrument overrides, exceptions, coaching, escalation and customer effort.
Pilots persist without an economic path.	Use explicit invest, sequence, partner and stop decisions at portfolio review.
