TELUS Digital Hiring Committee
Managing Director, CX AI Delivery

Redesign the workshare. Compound the delivery advantage.

TELUS Digital is not hiring this leader merely to add more AI capability to contact centers. The company already has operator scale, platform partnerships, proprietary Fuel iX capabilities, forward-deployed engineering and a global CX footprint. The harder mandate is to convert those assets into a profitable transformation practice: one that grows managed accounts, protects service quality, earns frontline adoption and becomes more repeatable with every delivery.

That is the problem I would come to solve. My operating thesis is that every target interaction portfolio needs an explicit human-AI workshare, a measurable economic case and a delivery pattern that can be reused without forcing every client into the same stack. The candidate vision at russelldudek.github.io/telus/ makes that reasoning visible through a CX AI Workshare Map, a 120-day entry plan and a portfolio investment memo.

My evidence is adjacent and practical. At Vape-Jet, I lead AI-first operating transformation across production, quality, support, customer success, engineering issue flow, ERP, CRM and machine telemetry. Through DudeWorth, I design AI-readiness and agentic-workflow mechanisms around value, data, human judgment, evaluation, adoption and governance. At Amazon, I led launch and execution in a 24/7 customer-backward environment supporting approximately five million second-day orders annually. At Compunetics, I led engineering, manufacturing, quality and customer delivery in high-reliability technical environments.

I have not spent a decade as a Partner in a top-tier CX consultancy, nor do I claim direct ownership of a global contact-center AI P&L. That is the strongest reasonable objection. My case is that I have repeatedly built the operating mechanisms this role requires: translating technology into work, exposing decision rights, connecting frontline behavior to executive outcomes, governing risk and creating accountability across functions.

I would welcome a rigorous case discussion. Give me a managed account, its interaction portfolio and its constraints. I will show how I would define the workshare, authority boundary, platform path, proof standard, commercial thesis and invest/sequence/partner/stop decision.

Thank you for considering the application.

Carpe diem,
Russell Dudek
